Case Study

# VOTIRG

# Award-winning media outlet eliminates threats embedded in files and reduces cyber risk to reporters by partnering with Votiro.

# About Award-Winning Media Company

Influential award-winning global media company (Company) known for in-depth reporting and coverage of national and international news, as well as its dedication to investigative journalism and hard-hitting exposés.

This organization has broken numerous important stories, uncovering scandals and shedding light on important issues that might otherwise have gone unnoticed. As a global influencer, this media organization has shaped worldwide politics and helped to maintain an informed populace.

As a global influencer, it has reporters stationed around the world to identify breaking news stories and provide up-to-the-minute coverage.

## **Challenges for the Company**

One of the greatest challenges of having an international presence for reporters is to ensure their safety and the safety of their sources. Reporters uncover scandals and political machinations that, if traced back, could place the reporters or their sources in danger.

### Challenges for the Company

Need to Keep Reporters & Sources Safe from Nation-State Actors for Continued Media Operations

As there is no standardized technology for the different reporters that report for the Company around the globe, they utilize various applications and devices which have no assurance of privacy.

# Media Company & Votiro Cloud At a Glance

### **Before Votiro**

- High risk of infiltration. Risk of nation-state actors infiltrating Company through source materials uploaded to centralized Company data lake by field reporters.
- Lack of file type support. Breath of file types used in daily course of business not supported.
- Slowed operations. Existing solution for removing threats from content slows file uploads, creating lag in media business operations.

#### **After Votiro**

- **Disarm**. Votiro disarms all content, eliminating hidden zero-day malware threats from content at massive speed and scale.
- Detect. Integrity of content for 180+ file types is maintained while all known and unknown threats are eliminated by default.
- Analyze. Integration with Company SIEM enables threat teams to quickly and efficiently analyze and gain visibility into threats.
- Without disruption. Simple installation, configuration, and seamless integration helps Company continue to break news stories quickly, ahead of competition.

### Challenges for the Company (cont.)

To complicate the situation, reporters upload source material files to a centralized Company Snowflake data lake that includes massive videos, images, and other file types. The Company wanted a way to ensure that content provided by reporters contained no hidden malicious threats embedded in files as they knew any hidden danger slipping through could impact business operations and exfiltrate sensitive information.

Stories by these reporters have global impacts, and threat actors include nation-states with the resources to generate novel attack vectors to embed in files.

#### **Driving Towards Efficiency**

Along with this, they needed to ensure that the security provided was seamless and did not require additional effort by staff to sanitize the content. Anytime additional steps are required, there is the potential that it creates lag in the news process or the steps could be overlooked, and failures in the process could dangerous exposures.

Finally, the organization also understood that efficiency is key, especially when sending information from overseas via communications channels that may be less current. Having a solution to eliminating hidden threats should have a minimal impact on the time from uploading to the content being available internally for review.

Significant delays could allow other media outlets time to break a story before they could.

# Votiro helps Media Company Ingest Files from Anywhere, at Scale, Safely

The Company tested Votiro Cloud to help seamless ingest the 4GB+ files into their Snowflake data lake, while ensuring that no hidden threats were hidden in these files.

#### Safer Files & Content, Faster

Once Votiro Cloud was deployed and integrated into the client's existing environment, they experienced a 50% reduction in sanitization time for large files from previous solutions. This accelerated the client's ability to move a story to publication.

#### Protecting Reporters & Breaking Stories

Using Votiro Cloud for Web Applications, a secure bastion was created for reporters to upload their content to the data lake, regardless of the geographic location in which they were working. This reduced the risk of the data lake becoming contaminated with malware or ransomware. This, in turn, prevented sensitive information being revealed, like reporters' locations or assignments, protecting them not only from cybercriminals but from the danger of nation-state actors.
