VOTIRO

Votiro & Zscaler

Download Content from the Web without Compromising on Security, Productivity, or File Fidelity

Working together, Zscaler Browser Isolation and Votiro Data Detection & Response (DDR) make for a total security solution for file downloads via the web.

Both platforms run on Zero Trust principles to ensure that users can download the content they need — seamlessly, in real-time, without hindering productivity and maintaining file functionality and quality.

The Benefits of Votiro + Zscaler

Threat Protection. Detects the true type of the files and performs actions accordingly, such as automatically blocking weaponized files with misleading file type extensions.

Data Protection. Images are reconstructed during the sanitization process, eliminating hidden code without compromising quality—applied to images in docs and archive files.

Ability to Scale to Support Security Infrastructure. As cloud-based solutions, organizations can scale traffic and file ingestion based on workload needs.

Privacy Compliance. Votiro DDR also provides the option to mask private information (PII, PCI, PHI) in real time, ensuring that sanitized files align with industry regulations.

Traditional Security Solutions
Are Not Enough

In the evolving 'Work From Anywhere' model, company employees and partners are increasingly working, collaborating, and sharing content online. Security teams are constantly challenged with keeping environments safe—without impacting business workflows or employee productivity.

Natively integrated within Zscaler's Zero Trust Exchange, Zscaler's Browser Isolation and Votiro's innovative DDR platform prevent malware attempts and potential data breaches while simultaneously ensuring organizations have a comprehensive content security solution for file downloads across browser, cloud storage, messaging, and content collaboration apps.
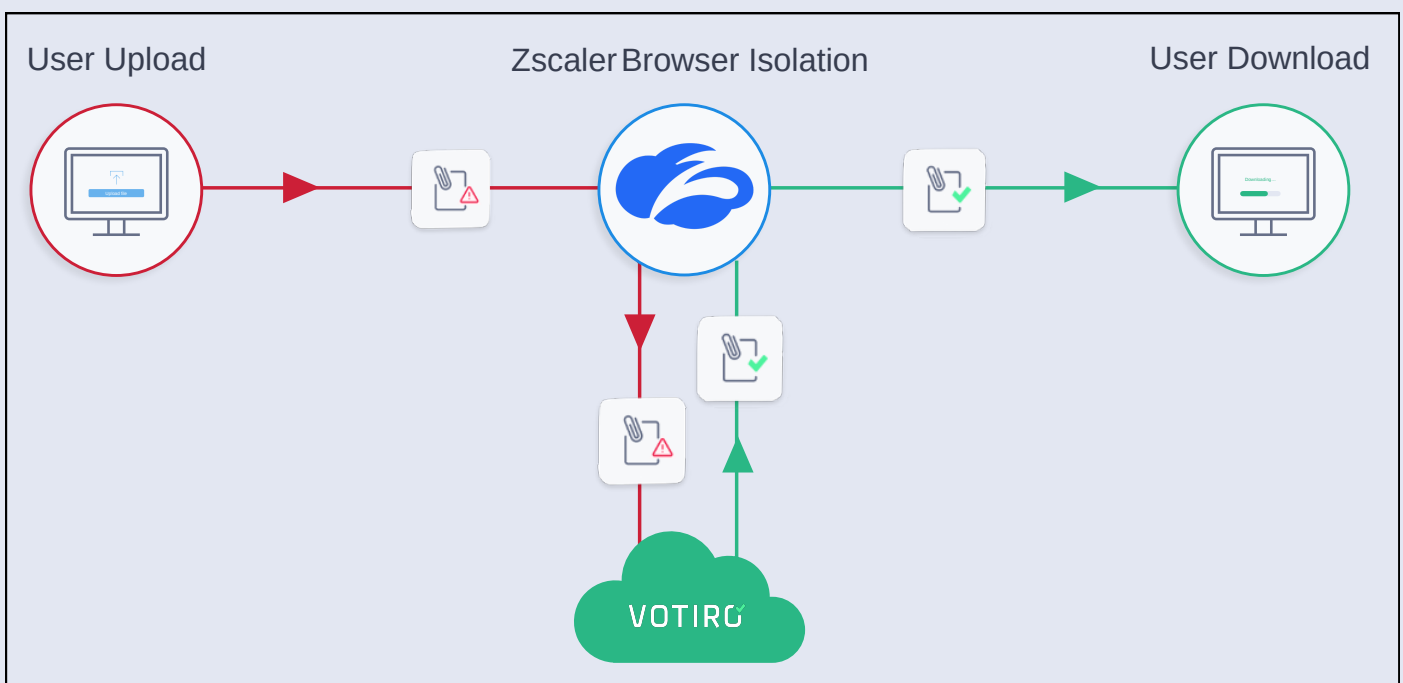

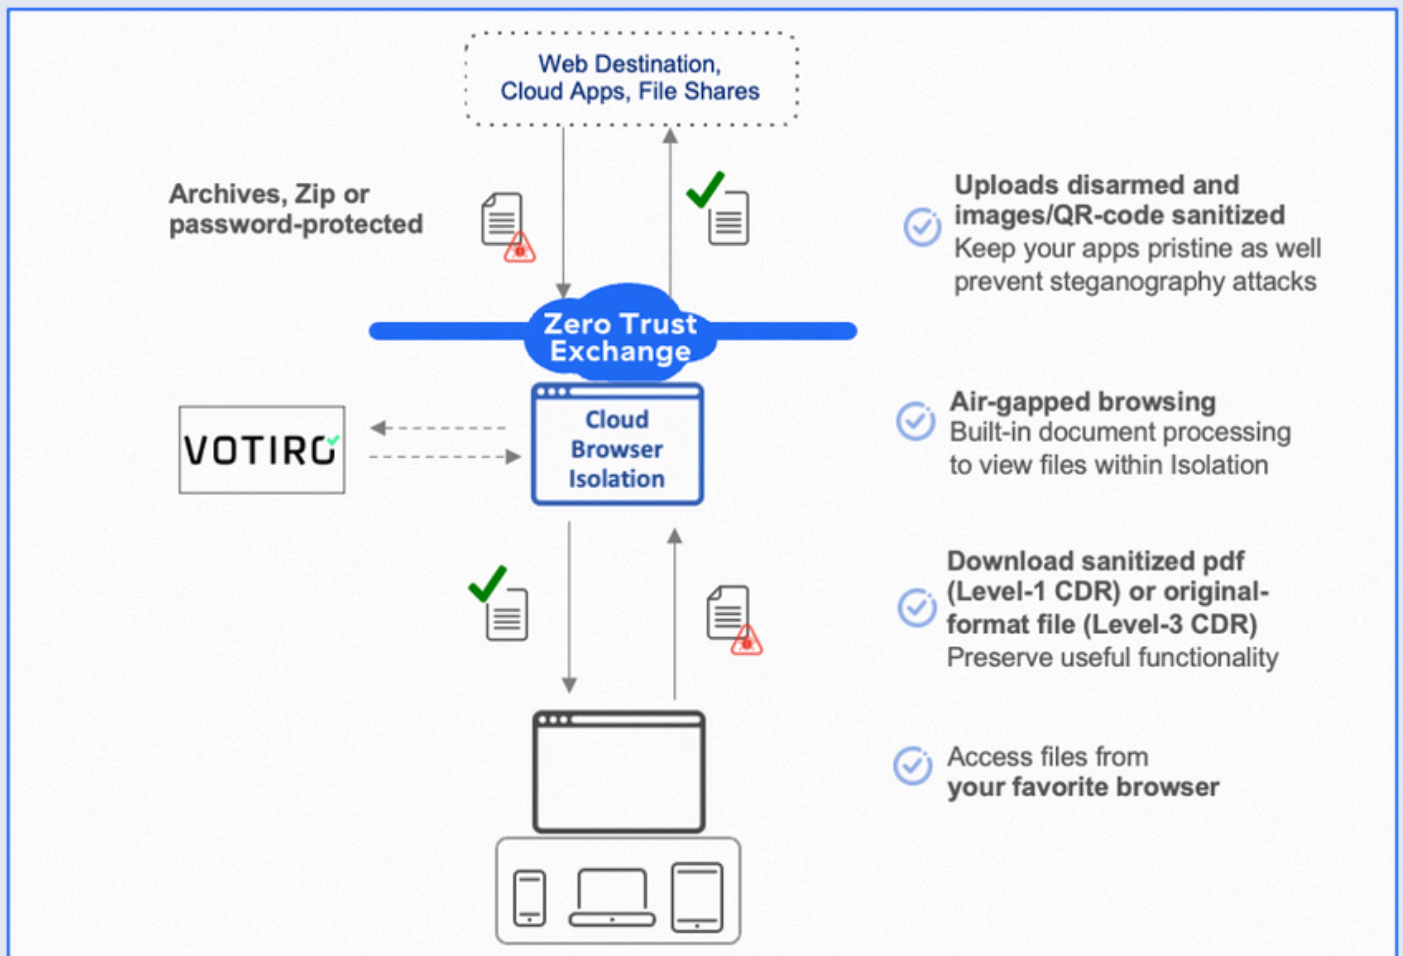

Customers can now reduce resources spent on removing files from quarantine or time spent unlocking files for use, boosting overall productivity for IT teams and end users.

"

File-borne threats hide as malicious code or macros with standard files that users download from the internet every day. Our holistic approach to cyber threat protection and data protection complements nicely with Votiro's Data Detection and Response platform. Together, we'll help more organizations safeguard their data from both web-based and file-borne threats."

— Amit Raikar, VP of Technology Alliances & Business Development at Zscaler

How Zscaler & Votiro Integrate

Web Destination, Cloud Apps, File Shares

Archives, Zip or password-protected

Zero Trust Exchange

VOTIRO

Cloud Browser Isolation

Uploads disarmed and images/QR-code sanitized
Keep your apps pristine as well prevent steganography attacks

Air-gapped browsing
Built-in document processing to view files within Isolation

Download sanitized pdf (Level-1 CDR) or original-format file (Level-3 CDR)
Preserve useful functionality

Access files from your favorite browser

User Upload

Zscaler Browser Isolation

User Download

VOTIRO

The ever-increasing sophistication of modern threats - both malware-based and privacy related - render traditional detect-and-disarm technologies insufficient protection. This is where the combination of Votiro DDR and Zscaler Browser Isolation provide a practical solution to meet your needs—now and into the future.

✅ Take advantage of a true **Zero Trust approach** for file downloads from the web

✅ Allow users to safely download **files in native format** without threat of hidden malware

✅ **Protects against malicious files** intentionally or unintentionally downloaded

✅ Improve workplace productivity with **seamless and safe web experiences**

One Platform. Zero Breaches. Seamless Protection.

Votiro is Zero Trust Content Security and Data Detection and Response in one platform. Votiro is trusted by industry leaders around the world to deliver billions of safe and compliant files to team members, vendors, and the customers that depend on them.
